

ABSTRACT

A method and machine for producing a package of tobacco articles complete with a folded coupon, whereby a flat
5 strip is unwound off a reel and fed to a folding station where the strip is folded over along at least one fold line parallel to the travelling direction of the strip; the folded strip is then fed to a cutting station, where the folded strip is cut along a cutting line crosswise to
10 the travelling direction of the strip to detach from the strip the folded coupon, which is engaged by a gripping head cooperating with the cutting station, and is fed to a seat on a packing conveyor and onto a packet of tobacco articles carried by the seat.
